■ COMMUNITY ENGAGEMENT PROJECT · TYBSCIT 2026–27

Tracez

Social Media Safety & Digital Footprint Awareness. An interactive website on trackers, scams, photo metadata and account security.

■ TEAM & COLLEGE

Sayyed Mohammad Mukarram Zafrul Hasan (30)
Ahmed Farooq Gardi (70)
Ebrahim Muhammed Shaikh (35)
Shaikh Rehan Aslam (65)
Guide: Ms. Heena Ansari
A. E. Kalsekar Degree College, Department of IT, University of Mumbai

■ THE PROBLEM

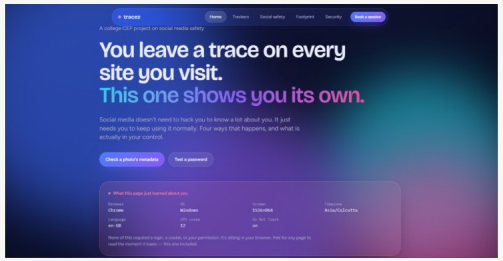

People give away personal data online without meaning to. Websites read browser details with no permission prompt, ads follow people, phone photos carry hidden GPS. Fake profiles and scams are hard to spot, and many students don't know which report to file.

■ SIX OBJECTIVES

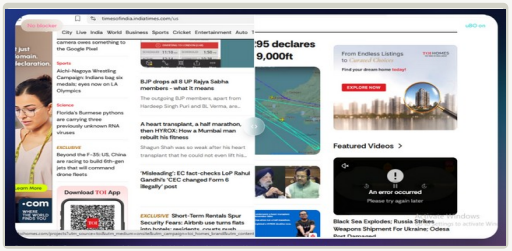

1. Show what a browser tells any website
2. Show what an ad blocker changes
3. Teach the signs of a fake profile and where to report
4. Read the hidden metadata in your own photos
5. Explain password managers, one-time codes, passkeys, in adoption order
6. Offer privacy sessions booked without a password

Made with GAMMA

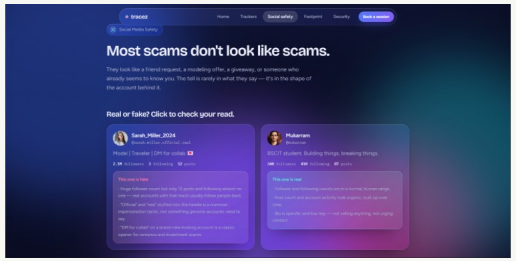

Six pages, one idea: pink marks what is exposed, cyan marks what is protected

What each page does and how it works

Page	Visitor does	How it works
Home	Reads device facts	Browser, OS, screen, time zone; no login
Trackers & Ads	Drags before/after slider	Times of India, ad blocker off and on; 4 blocks became 1
Social Safety	Judges real or fake profile	Reasons and reporting form; IT Act 66C and 66D
Footprint	Picks a photo	Reads Exif, XMP, IPTC; GPS opens on OpenStreetMap
Account Security	Tests and generates passwords	Entropy score 0 to 5; 64-character generator
Book a session	Picks a privacy slot	Emailed sign-in link; Supabase Auth, no stored passwords

Every demo runs in your browser. Only booking sends data: name, email, slot.

ENGINEERING METHODOLOGY

How we followed the SDLC

PLANNING	Four themes, six objectives; students and teachers as audience; work divided among four of us.
REQUIREMENT ANALYSIS	Three privacy rules; checked 22 sources; dropped two claims we could not support.
DESIGN	Two versions; the live one uses dark panels, pink for exposed, cyan for protected.
DEVELOPMENT	React 19, React Router 7, Vite 8, Tailwind CSS 4, ExifReader 4, Supabase.
TESTING	Run locally before every push; fixed Supabase error 42501 without widening read access.
DEPLOYMENT	Every push to main builds with GitHub Actions and publishes to GitHub Pages.
MAINTENANCE	Static facts go stale; planned last-checked dates, Marathi and Hindi versions, feedback form.

What came out of it

■ FIELD PILOT & FINDINGS

The live site has six pages: home, four topic pages and booking. Three interactions with 4 students each on 9 October 2026:

In the live demo, most did not know a site reads screen size and time zone without asking. A phone photo showed camera model and GPS; several said they would turn off location tagging. In one booked session, we set up an authenticator app on one email account.

A page reads device facts with no prompt. A photo can reveal where someone lives; the sharing route matters as much as the phone setting. Impersonation, deepfakes and scam ads each need a different report.

https://btwebrahim.github.io/social-media-safety/

■ HABITS & LIMITS

Check what a photo carries before sending it. Secure your email first, then add an authenticator app. For a fake account, take screenshots, report through the matching form and file at cybercrime.gov.in.

For the college: a short privacy session in the first week of each year, with the site as demo material.

We showed the features work and students reacted; we have not measured whether people change what they do.
